

1 Introduction

The goal of this assignment is for you to practice and for the teaching staff to assess your ability to test large-scale applications.

You are provided with Calendar, a web application to manage your calendar, and search relevant events from other sources.

Calendar is build on SpringBoot and, as such, follows an MVC pattern. It is available at <https://github.com/alcides/calendar>.

2 What to do

Your mission, should you choose to accept it, is to:

1. Write Unit tests for the Business Logic, mocking the necessary classes.
2. Write Integration tests for the integration with 3rd party sources.
3. Write Integration tests at the REST API level.
4. Write Integration tests that use the concrete database (albeit not the production one!)
5. Write End-to-End tests, using Selenium and a testing database.
6. Set up Continuous Integration in your branch.

If necessary, in order to implement what is asked in this assignment, you can adapt the SUT. In the final report, you should list all modifications and explain why it was necessary to perform them.

3 Deliver

Upload a zip of your individual's work into the course's moodle webpage until 23:59 of June 16th. The zip file should be named `vvs02_XXXXX.zip` where XXXXX is your student's id number.

4 Assessment

Your grade will depend on a) the quality of your report, b) the quality of your decisions in testing, c) your ability to detect a bug that will be introduced in a future commit.

5 Feedback

You are expected to pose questions during class, as well as on the Moodle forum. You are not expected to be able to solve the project without interacting with the teaching staff.

The zip must include:

- the git repository
- a pdf report with all the necessary information regarding your work

6 Academic Integrity

As a future IT professional, we expect from you an irreproachable attitude, in both ethical and moral terms. Be specially attentive in observing and enforcing the laws of computer crime. Students caught in fraud or plagiarism situations (plagiarists and plagiarised) in assignments or exams automatically fail to complete the course and will be prosecuted, leading to a process that may end up in suspension or in abandoning the university.
